

# RHINO-RS

## LPS1175 Rated Security Shutters

Designed to resist attacks from a deliberate forced entry using bodily force and a wide selection of attack options, the Rhino-RS range of LPS1175 SR2, 3, 4 & 5 rated security shutters are used in high-risk areas.

Many shutters require additional auxiliary locking that is manually put in place after the shutter has been lowered. This additional action means that the shutter can only be operated internally. The unique Lockdown technology, included in every Rhino-RS shutter, means shutter can be operated externally. This allows them to be used on first points of entry and ensures the shutter is never left in an insecure position through an incomplete locking procedure.
