

## Container-Packer CP 1100

### Deflate the air out of your waste

Waste and recycable waste can be filled in the normal 1,1m<sup>3</sup> bins and compacted by a pivoting compaction plate. The volume can be reduced up to 1 : 3  
As quantity of waste and costs are constantly rising, the unit is cutting both: quantity and costs

The compactor can be used in- and outside. Open the lid of the container and push the container onto the platform of the compactor. The compaction plate must be lifted. There is enough space for filling in. When the container is full, the compaction plate manually operated with two hands compacts inside the bin. It is absolutely

full as soon as there is no more space for filling in more.

The container will be lifted in order to protect the rolls.

Possible also for other bins like 770 liter bins etc. Operation with two hands . One for the switch for the e-motor and one for the hydraulic lever.

### Technical datas

Motor	Total weight	Electric connection	Stroke	Pressure	compaction plate	Dimensions over all
1 KW	245 kg	220 Volt	Curved	3.200 dN	1.000 x 630	1.980 x 1.200 x 1.250 H x W x D

\* Machine is supplied without bins. Bins can be quoted separately as per customer's request.
