# Basalt

**Basalt** (Andesite Stone) is one of the most versatile stones available, the Black Titan Basalt is available in 7 different finishes which can be utilised as floor tiles, pavers, cladding, pool copings or step treads. Whether it is used indoors as a modern bathroom flooring solution, as external cladding on a high-rise building, or as pool copings in your backyard, this durable stone will not disappoint. Herewith our basalt stone collection

- Tropical Red Basalt
- Baltic Grey Basalt
- Green Basalt
- Grey Basalt
- Crystal Black Basalt
- Ocean Blue Basalt

**Composition** : Basalt is a very finely-grained igneous rock containing mainly plagioclase, amphibole and biotite materials. Basalt is similar to andesite but with a higher silicon oxide content.

## Characteristics :

- Basalt is ideally suited for use as pavers and tiles in high volume traffic areas
- Light/Dark Grey colouring with small or large Amphibole flecks distributed randomly through stone
- Split faced ideal for water/landscape garden features
- Great durability
- Natural non-slip character
- Good heat noise isolation properties
- Non fading, unlike concrete based paving
- Strong resistance to environmental degradation
- Good compressive strength
- Good flexural strength

## Indonesia Basalt Stone (Indonesia Andesite Stone)

**Basalt/andesite stone** is a natural lava stone formed from volcanoes. It is commonly available in consistent grey, grey/green, blue/grey colors which are much suitable to mix with the contemporary and modern decoration designs. Made from lava, the stone has good resistance towards heat. The properties also look like what the granite has, causing the products suitable for internal and external purposes. With this fact, it is no wonder that *Indonesia Basalt Tiles* (also know as Indonesia Andesite Stone) are much popular. It is common to use this tile type as flooring materials on the high traffic area as the stone has strong enough to handle heavy duty.

As the color of basalt/andesite tiles is usually grey or darker, it is flexible to use this material anywhere in the house. You can use it as the flooring material or play with some fun creating unique accent on the pool and wall with the *Indonesia Basalt Tiles*. The variety of machines to finish the stone allows designers to deliver their creativity to make the ordinary basalt into great quality tiles. As one of the hardest natural stone materials, basalt is also much preferred by architecture for its exceptionally strong physical quality. Instead of taking the honed or flamed surface, it is better to take the tiles with brushed finish.

Some of our Indonesia basalt / Andesite stone as follow:

- Tropical Red Basalt / Andesite Stone
- Baltic Grey Basalt / Andesite Stone (Impala stone andesite)
- Alta Quartz Basalt / Andesite Stone
- Green Basalt / Andesite Stone (TM Green Basalt Andesite Stone)
- Grey Basalt / Andesite Stone (SR Grey Basalt Andesite Stone or Black Titan Basalt)
- Crystal Black Basalt / Andesite Stone (Black Absolute Basalt Stone)
- Blue Basalt / Andesite Stone (Ocean Blue Basalt)

## Indonesia Basalt Stone – Bali Design Characteristic

Cleaning is a part of maintenance that you need to do to prolong the quality of the tiles. It is easy to do with no hassles. To clean the *Indonesia Basalt/andesite Tiles* regularly, you can use vacuum cleaner to remove the dust and grit from the surface. Occasionally, you will need to use a microfiber mop or cloth dampened with warm water without adding any chemical. If you worry about the bacteria, you are able to use the good quality microfiber which is made from 99.9% anti-bacterial fabric. However, it requires a neutral ph chemical to clean up the spots like marks, spills and stains.

Basalt/Andesite stone is also known as young volcanic stone. As it is made from lava, it contains of argon gas, trapped within the flows. The various processes done on the stone, from cutting to finishing, make some changes on the original color. The *Indonesia Basalt/Andesite Tiles* will also look hazing or seem having a light bloom within. It happens because the contained minerals and salts are released as the cause of moisture and polymer application on the surface. When you want to buy the tiles, but feel unsure with the best choices to pick, you can first do a research online. Find the trusted supplier to get the high quality tiles made from originally from Indonesia volcanic basalt/andesite stone.

- Breksi has natural wavy grey colouring
- Breksi contains some larger crystalline components
- Excellent suitability for indoor and outdoor applications
- High stone density – Classic White and Gold material
- Colour longevity
- Easily crafted
- Wide variety of finishes

## Indonesia Limestone Tiles and Limestone Pavers

Limestone is a kind of natural stone that has been used for many years for building construction. It is used both for the walls and floorings of building. This natural stone is popular and used widely because this has a beautiful appearance and array of different textures to choose from. This beautiful stone is mostly imported by Asian countries such as China and Indonesia, *Indonesia Limestone tiles* are known to be high in the quality and extremely beautiful in the appearance. As a kind of natural stone tiles, limestone tiles offer some pros and cons that you might need to know before deciding the buy the tiles.

Starting from the pros, the most interesting pros of this natural flooring is its beauty. The beauty of limestone has attracted many homeowners to use it as flooring. The appearance of the stone can create any different look in a home that you want. Especially when your home is furnished with distressed and rustic furniture, limestone can be the best option to pair with. As a natural stone, limestone feels cool. It is appropriate for those living in warm areas so that you can feel the cool feeling whenever you step on your flooring. These are some pros of *Indonesia limestone tiles* that can make you comfortable installing this kind of tiles in your home.

While there are many benefits offered by limestone tiles, this kind of natural tile also carries some disadvantages including the difficult care and maintenance. Once you decide to install this natural stone flooring in your home, it means that you are ready for the hard maintenance of the tile. Also, limestone is soft even for the hardest part of limestone. It is quite susceptible to damage especially when this is used in heavy traffic. This is why limestone is actually not recommended for heavy traffic areas considering that this is soft. Also, *Indonesia limestone tiles* are also porous making it absorbent to stains so easy.

By knowing the pros and cons of the limestone tiles, you can decide whether this tile is good for you or not. For some people, the cons of this natural stone might not be really matter because the cons offer more benefits. So, it actually depends on you to determine whether this is great or not for you. If you need a kind of tile that can be used to enhance the value of your home decor, *Indonesia limestone tiles* can be a very great option. However, if you need the one with an easier maintenance, you can use another option of tile.

## Stone Wall Cladding

Stone wall cladding is made from various Indonesia natural stone such as marble, limestone, basalt and sandstone. Our factory is able to work based on your inquiry with special design of wall cladding and stone mosaic.

Installing **bali natural stone wall cladding** can give your exterior house design a better look since the appearance of the natural stone can blend to the surrounding area of your house. Not only for exterior, wall cladding is also good for interior walls. Whether you are installing the wall cladding inside or outside, there are some things you should put into account before installing the wall cladding to your home. Considering some important things will help you come up with the best wall cladding that is good for your home. This is because you have so many options to choose from and picking the best option is not an easy task.

**Bali Natural stone wall cladding** installed to your interior or exterior walls will not only enhance the appearance of your home decor, but also add more functions to the walls. The wall cladding might be able to improve the insulation of the walls and seal the walls to make it more durable and moisture resistant. Stone wall cladding is available in several different options to choose from such as manufactured and natural stone cladding. Many people prefer using manufactured cladding that comes in sheets to make the project easier and less expensive since the price of manufactured stone is cheaper than natural stone.

Natural stone that is used for wall cladding is usually well created to make the stone thin so that this is appropriate for the wall cladding. So, although this is made of natural stone, it is quite light in the weight since this is well made. You will not find any problem installing the wall cladding to your home because **bali natural stone wall cladding** is easy to handle. Another option as the alternative to the natural stone cladding is synthetic stone wall cladding, which is made of concrete in the look of shape resembling real stones. Both of them are actually great, so you can decide which one you will go with.

There is a range of colors to choose from when it comes to make a plan for your **bali natural stone wall cladding** project. The colors you choose depend on the style and designs of your house. You can use the wall cladding to create a certain design or style in your house. When choosing the right wall cladding, you might need to consider the maintenance of the wall cladding because you surely do not want to get busy finding a good way maintaining your wall cladding to make it still beautiful overtime.
